(2007 - Skripsi)

Salh satu upaya terobosan untuk mengatasi masalah kesehatan yang berbasis lingkungan adalah keberadaan klinik sanitasi. Klinik sanitasi sebagai salah satu pelayanan puskesmas yang mengintegrasikan antara upaya kuratif, promotif dan preventif yang mempunyai peran sebagai pusat informasi, pusat rujukan, fasilisator di bidang kesehatan lingkungan dan penyakit berbasis lingkungan. Dari hasil evaluasi kegiatan pelayanan klinik sanitasi yaitu cakupan pelaksanaan klinik sanitasi baru mencapai 35% sedangkan target yang harus dicapai 100%, masih tingginya kunjungan penyakit berbasis lingkungan pada semua puskesmas dikarenakan pelayanan klinik sanitasi yang tidak berjalan dengan optimal. Tujuan penelitian ini adalah untuk mengetahui faktor - faktor yang berhubungan dengan kinerja petugas sanitarian dalam pelayanan klinik sanitasi di Dinas Kesehatan Kota Cirebon. Jenis penelitian ini penelitian *explanatory* dengan pendekatan *cross sectionnal*, sampel dalam penelitian berjumlah 21 orang. Data yang terkumpul di analisa dengan analisa univariat dengan distribusi frekuensi, analisa bivariat dengan tabulasi silang dan uji *fischer Exac probability*. Berdasarkan uji *chi Square* dengan derajat kepercayaan 95% ( $p = 0,05$ ) menunjukkan bahwa variabel beban kerja ( $p = 0,0011$ ), Motivasi ( $p = 0,031$ ), Kompensasi ( $p = 0,002$ ), Supervisi ( $p = 0,014$ ), Persepsi ( $p = 0,006$ ), Sikap ( $p = 0,031$ ) terbukti secara statistik mempunyai hubungan yang signifikan dengan kinerja sedangkan variabel pelatihan ( $p = 1,000$ ) > dari  $p = 0,05$  terbukti secara statistik menunjukkan tidak ada hubungan antara pelatihan dengan kinerja. Guna meningkatkan kinerja sanitarian puskesmas perlu dilakukan pertemuan secara berkala untuk membahas tentang uraian tugas ( job description ) pelayanan klinik sanitasi di puskesmas dan supervisi dilakukan secara rutin serta diberikan umpan balik dan tindak lanjut yang jelas sesuai dengan kebutuhan.

**Kata Kunci:** kinerja, sanitarian, klinik sanitasi

*THE FACTORS RELATED TO PERFORMANCE OF PUBLIC HEALTH CENTER  
SANITARIAN IN CLINIC SERVICE OF HEALTH OFFICIAL OF CIREBON CITY*

*One of the breakthrough efforts to overcome the problem of health being environmental based is existence of sanitation clinic. Sanitation clinic as one of the Public Health Center services integrating among of curative, promotive and preventive efforts having role as information center, reference center of facilitator in environmental health sector and environmental based diseases. From result of evaluation of service activities of sanitation clinic that is coverage of service of sanitation clinic has just reached 35% while goals which must be reached is 100%. The high amount of visit with environmental based disease at all of public health center because of sanitation clinic service has been not done yet optimally. The intent of this research is to know some factors related to performance of sanitarian officers in sanitation clinic service of public health official of Cirebon City*

*The type of research is explanatory research with cross sectional approach, sample of this research is 21 responders. The collected data analyzed by univariate analysis with frequency distribution, while bivariate analysis analyzed by cross tabulation and Fisher exact probability test. According to chi square test with reliability level of 95 % (  $p$  value=0,05) indicated that variable of work load ( $p=0,011$ ), motivation ( $p=0,031$ ), compensation ( $p=0,002$ ), supervision ( $p=0,014$ ), perception ( $p=0,006$ ), attitude ( $p=0,031$ ) was statistically proven that they had a significant correlation to performance while variable of training ( $p=1,000 > p=0,005$ ) indicated that statistically proven there was no a correlation between training and performance. In order to improve performance of public health center sanitarian it is needed to be made a periodical meeting to study about job description of sanitation clinic service in public health center and supervision done routinely as well as given a feedback and explicit follow-up as according to requirements.*

*Keyword : performance, sanitarian, sanitation clinic*
