

HUBUNGAN ANTARA KARAKTERISTIK IBU DAN KEAKTIFAN MENIMBANGKAN ANAK DI
POSYANDU DESA JENDI KECAMATAN SELOGIRI KABUPATEN WONOGIRI

SENO RAHARJO -- E2A301145
(2003 - Skripsi)

Desa Jendi merupakan desa yang mempunyai rata-rata partisipasi masyarakat dalam kegiatan penimbangan yang terendah, yaitu : kegiatan penimbangan (D/S) adalah 37,24%, hasil kegiatan penimbangan (N/D) 83,56% dan hasil pencapaian penimbangan (N/S) adalah 31,12%. Penelitian ini ditujukan untuk menganalisis korelasi antara karakteristik ibu dan keaktifan menimbang anak di posyandu Desa Jendi Kecamatan Selogiri Kabupaten Wonogiri. Metode penelitian yang ditempuh adalah survei sampel dengan pendekatan *cross sectional*. Populas dalam penelitian ini adalah semua ibu yang mempunyai anak balita di Desa Jendi sedangkan sampelnya adalah semua ibu yang mempunyai anak balita berumur 12-60 bulan. Hasil penelitian : umur ibu 26-30 tahun (33,6%), tingkat pendidikan sebagian besar tamat SD (37,4%), tingkat pengetahuan gizi ibu sebagian besar baik (74%), sebagian ibu tidak bekerja (54,2%), anak yang menjadi tanggungan keluarga sebagian besar ≤ 2 (71%). Faktor yang berhubungan dengan keaktifan ibu menimbang balita di posyandu adalah pendidikan, pengetahuan, status bekerja, jumlah tanggungan anak. Sedang faktor umur ibu tidak berhubungan dengan keaktifan menimbang di posyandu. Saran perlunya peningkatan frekuensi penyuluhan baik pada ibu dan kader tentang gizi dan makanan sehat anak balita serta peran posyandu.

Kata Kunci: Tingkat keaktifan ibu, karakteristik ibu, posyandu

THE RELATIONSHIP BETWEEN MOTHER'S CHARACTERISTIC AND
THE ACTIVES TO WEIGH THE BABY IN THE 'POSYANDU' OF JENDI
VILLAGE, SELOGIRI SUBDISTRICT, WONOGIRI REGENCY

Jendi Village is a village, which has the lowest public participation mean in the activity of weighing, namely: its weighing activity (D/S) is 37, 24%, the result of the weighing (N/D) is 83,56%, and the result of the weighing achieving (N/S) is 31,12%. The research's aim is to analyze the correlation between mother's characteristic and the actives to weigh the baby in the 'posyandu' of Jendi village, Selogiri Sub District, Wonogiri regency. The research method was conducted through sample survey with the cross sectional approach. The population in this research was all mothers having children under five in Jendi Village, meanwhile its sample was all mother having children under five in the age of 12 to 16 months. The result of the research: mother's age of 26-30 years old (33,6%), the majority of mother education level was elementary school (37,4%), mother's nutrient knowledge level mostly was good (74%), mostly mother didn't work (54,2%), mostly the child who becomes dependent was ≤ 2 (71%). Factors related with the mother's actives to weigh her baby in 'posyandu' were education, knowledge, working status, the number of child dependent. Meanwhile mother's age factor was not related with the actives to weigh her baby in 'posyandu'. Suggestion it is necessary to increase the frequency of extension about nutrient, and healthy food of baby to mother, cadre and also the role of 'posyandu'.

Keyword: The level of mother's actives, mother's characteristic
