BAB I. PENDAHULUAN .......................................................... I-1
   A. Umum .............................................................................. I-1
      1. Jenis Kapal .............................................................. I-1
      2. Kecepatan Kapal ...................................................... I-1
      3. Masalah lain ............................................................ I-2
   B. Karakteristik Kapal Tunda ........................................... I-3
   C. Tahap Perencanaan ..................................................... I-3
      1. Perhitungan Rencana Garis ...................................... I-4
      2. Perhitungan Rencana Umum ................................... I-8
      3. Perhitungan Rencana Konstruksi ............................. I-13
      4. Perhitungan Rencana Bukaan Kulit ......................... I-20
      5. Perhitungan Rencana Sistem Perpipaan ................. I-23

BAB II. PERHITUNGAN RENCANA GARIS .............................. II-1
   A. Perhitungan Dasar ....................................................... II-1
      1. Panjang Garis Air (LWL) ........................................... II-1
      2. Panjang Displacement (L_{\text{Displ}}) ...................... II-1
3. Coefisien Midship (Cm) Menurut Van Lammerent ........................................ II-1
4. Coefisien Water Line (CW) menurut formula Throast........................................ II-1
5. Coefisien Prismatik........................................ II-1
6. Luas Garis Air (Awl) ........................................ II-1
7. Luas Midship (Am)........................................ II-2
8. Volume Displacement (C)........................................ II-2
9. Coefisien Prismatik Displacement (Cp Displ) ........................................ II-2
10. Displacement (D)........................................ II-2

B. Menentukan Letak LCB........................................ II-3
   1. Dengan menggunakan Cp Displacement pada Grafik NSP ........................................ II-3
   2. Menurut Diagram NSP dengan Luas Tiap Section ........................................ II-3
   3. Perhitungan Coefisien Prismatik depan (Qf) dan coefisien Prismatik belakang (Qa) berdasarkan table Van Lamerent........................................ II-7

C. Rencana Bentuk Garis Air ........................................ II-16
   1. Perhitungan Sudut Masuk ........................................ II-16
   2. Perhitungan Luas Bidang Garis Air ........................................ II-17

D. Perhitungan Radius Bilga........................................ II-20
   1. Luas Segitiga ABC ........................................ II-21
   2. Perhitungan........................................ II-21

E. Rencana Body Plan........................................ II-23
   1. Rencana Bentuk Body Plan........................................ II-23
   2. Perhitungan Koreksi Volume Displacement Rencana Body Plan........................................ II-24

F. Perhitungan Chamber, Sheer, Dan Bangunan Atas........................................ II-28
   1. Perhitungan Chamber........................................ II-28
2. Perhitungan Sheer ......................................................... II-28
3. Perhitungan Jumlah Gading ........................................... II-29
G. Perhitungan Ukuran Daun Kemudi ................................. II-32
H. Stern Clearance............................................................ II-35
I. Haluan Kapal (Stem) ..................................................... II-37
J. Buritan Kapal (Stern)....................................................... II-38

BAB III. PERHITUNGAN RENCANA UMUM ....................... III-1
A. Jumlah Dan Susunan Anak Buah Kapal ............................ III-1
   1. Jumlah ABK .............................................................. III-2
   2. Susunan ABK ........................................................... III-5
B. Perhitungan Berat Kapal .................................................. III-6
   1. Volume Badan Kapal Dibawah Garis Air (V)................. III-6
   2. Displacement Kapal (D)............................................... III-6
   3. Perhitungan Berat Kapal Kosong (LWT)....................... III-6
      3.1. Menghitung Berat Baja Kapal Kosong (Pst) .......... III-7
      3.2. Menghitung Berat Peratalatan Kapal (Pp).......... III-7
      3.3. Berat Mesin Penggerak (Pm)............................... III-8
   4. Perhitungan Berat Mati Kapal (DWT)........................... III-8
   5. Perhitungan Berat Muatan Bersih (Pb)........................... III-9
      Berat Bahan Bakar (Pf) ............................................. III-9
      Berat Minyak Lumas (Pl) .......................................... III-10
      Berat Air Tawar (Pa) ................................................. III-11
      Berat Bahan Makanan (Pm) ....................................... III-13
      Berat Crew dan Barang Bawaan (Pc)......................... III-14
C. Pembagian Ruangan Utama Kapal ................................. III-16
   1. Penentuan Jarak Gading ............................................. III-16
   2. Menentukan Sekat Kedap Air ..................................... III-18
      Sekat Ceruk Buritan ............................................... III-18
      Sekat Depan Kamar Mesin ....................................... III-19
      Sekat Tubrukan ..................................................... III-21
      Sekat Untuk Ruang Peralatan ................................... III-21
   3. Perhitungan Dasar Ganda ............................................ III-23
4. Perhitungan Volume Ruang Mesin.......................... III-26
5. Perhitungan Volume Ruang ABK ......................... III-30
6. Perhitungan Tangki Lainnya .................................. III-31
   Perhitungan Volume Tangki Bahan Bakar ........ III-31
   Perhitungan Volume Tangki Air Tawar .......... III-33
   Perhitungan Volume Tangki Minyak Lumas..... III-34
   Perhitungan Volume Tangki Ballast .............. III-36
7. Penentuan Ruang Akomodasi................................. III-42
   Ruang Tidur .................................................. III-42
   Sanitari Akomodasi ......................................... III-44
   Ukuran Pintu dan Jendela ............................... III-45
8. Perencanaan Ruang Konsumsi ............................. III-47
   Gudang Bahan Makanan ................................. III-47
   Dapur (Galley) ............................................... III-48
   Ruang Makan (Mess Room) ............................ III-49
   Pantry ......................................................... III-49
9. Perencanaan Ruang Navigasi ............................... III-50
   Ruang Kemudi ................................................. III-50
   Ruang Peta (Chart Room) .............................. III-50
   Ruang Radio .................................................. III-51
   Lampu Navigasi ............................................. III-51
   Lampu Navigasi ............................................. III-51
   Lampu Jalan .................................................. III-51
   Lampu Gandeng .............................................. III-51
   Lampu Sorot .................................................. III-51
   Lampu Samping ............................................... III-51
    Ruang Mesin Kemudi .................................. III-53
    Gudang Lampu ................................................ III-53
    Gudang Tali ................................................... III-53
    Gudang Accumulator ...................................... III-53
D. Perencanaan Ventilasi ........................................ III-54
Bab IV. Perhitungan Rencana Konstruksi Profil

A. Perhitungan Beban
   1. Beban Geladak Cuaca
   2. Beban Geladak pada Bangunan Atas
   3. Beban Sisi
   4. Beban Alas

B. Perhitungan Tebal Plat Geladak Kekuatan Dan Plat Kulit
   1. Plat Geladak
   2. Plat Geladak Bangunan atas
   3. Plat Sisi Kapal
   4. Bangunan Atas
   5. Plat Lajur Bilga

E. Perlengkapan Keselamatan Pelayaran
   1. Pelampung Penolong
   2. Baju Penolong
   3. Rakit Penolong Otomatis
   4. Pemadam Kebakaran

F. Perencanaan Perlengkapan Berlabuh Dan Bertambah
   1. Jangkar
   2. Rantai Jangkar
   3. Tali Temali
   4. Bak Rantai
   5. Hawse Pipe
   6. Winchlass (Derek Jangkar)
   7. Bollard
   8. Fair Lead and Chock

G. Peralatan Tarik
6. Plat Lajur Atas ................................................................. IV-26
7. Plat Lunas Kapal ............................................................... IV-27
8. Plat Penyanyaga Linggi Buritan, Baling-baling dan Lunas Bilga................................................................. IV-28
9. Bukaan Pada Plat Kulit ....................................................... IV-28
10. Kotak Laut (Sea Chest) ...................................................... IV-29
11. Kubu – Kubu ....................................................................... IV-29
12. Plat Geladak ........................................................................ IV-29

C. Konstruksi Dasar Ganda .................................................... IV-30
1. Penumpu Tengah (Centre Girder) .......................... IV-30
2. Alas Ganda Sebagai Tangki .................................. IV-31
3. Alas Dalam (Inner Bottom) ................................. IV-31
4. Alas Ganda Dalam Sistem Gading Melintang .... IV-32

D. Perhitungan Gading-Gading ............................................... IV-38
1. Jarak Gading ................................................................. IV-38
2. Gading-gading Utama ................................................ IV-38
3. Gading Utama pada Bangunan Atas .................... IV-41
4. Senta Sisi (Side Stringer) ........................................ IV-43
5. Perhitungan Gading Besar (Web Frame) .......... IV-44
6. Gading Besar pada Bangunan Atas .................... IV-48

E. Perhitungan Balok Geladak .............................................. IV-51
1. Balok Geladak (Deck beam) ................................ IV-51
2. Balok Geladak pada Bangunan Atas .................... IV-53
3. Balok Geladak Besar (Strong Beam) .................. IV-55
4. Balok Geladak Besar Bangunan Atas ............... IV-58

F. Penumpu Geladak (Deck Girder) ................................... IV-62
1. Center Deck Girder dan Side Deck Girder .......... IV-63
2. Penumpu Geladak Bangunan Atas ..................... IV-66

G. Bulkhead (Sekat Kedap) .................................................. IV-69
1. Sekat Kedap Air ............................................................. IV-69
2. Stiffener Sekat Kedap Air ........................................ IV-71
3. Stiffener Bangunan Atas ........................................... IV-72
4. Web Stiffener .......................................................... IV-74
5. Web Stiffener pada Bangunan Atas .............................. IV-75

H. Bracket ................................................................. IV-79

BAB V. BUKAAN KULIT .................................................. V-1

A. Perhitungan Beban ................................................... V-1
   1. Beban Sisi ............................................................... V-1
   2. Beban Alas Kapal .................................................... V-5

B. Perhitungan Tebal Plat Geladak Kekuatan Dan Plat Kulit ...
   1. Plat Geladak Kekuatan ........................................... V-6
   2. Plat Geladak Bangunan atas ...................................... V-7
   3. Plat Alas Kapal ....................................................... V-8
   4. Plat Sisi ................................................................. V-9
   5. Plat Lajur Bilga ....................................................... V-11
   6. Plat Lajur Atas ....................................................... V-12
   7. Plat Lunas Kapal ..................................................... V-12
   8. Plat Penyangga Linggi Buritan, Baling-baling dan
      Lunas Bilga................................................................. V-13
   9. Bukaan Pada Plat Kulit............................................. V-13
  10. Kotak Laut (Sea Chest) ............................................. V-14
  11. Kubu – Kubu .......................................................... V-14

BAB VI. PERHITUNGAN SISTEM PIPA ................................ VI-1

A. Umum ......................................................................... VI-1
B. Bahan Pipa .............................................................. VI-1
C. Ukuran Pipa ............................................................. VI-4
D. Macam – Macam Katup ............................................... VI-7
E. Bahan Katup dan Peralatan (Fitting) ............................ VI-9
F. Flens .......................................................................... VI-10
BAB VI. PENUTUP
