

Pengelolaan DAS karena Faktor-Faktor Perubahan Penggunaan Lahan untuk Pencegahan dan Pengendalian Banjir

Djoko Suwandono

ABSTRACT

Flooding is a phenomenon that has been long, but at present time often cause damage to the community and natural environment that cause a huge loss. The Region of Regional River Flow (DAS) also becomes the cause of flooding, due the uncontrolled using of this area that should be conserved to protect ecosystems, compulsory to be exploited by society because to fulfill their needs. Therefore, necessary to have spesific treatment for watershed area. Recommendations that can be given, among other things by controlling causes of the changes of land use, or in terms of watershed management is because the factors of land use changes for the prevention and control flooding.

Keywords: Flood, Watershed Area, Land Use
