COURSE OUTLINE
and
SET OF COURSE

Course: MANAGEMENT INFORMATION SYSTEM
Code/credits: EM 349 / 3 SKS

MANAGEMENT DEPARTMENT
FACULTY OF ECONOMICS
DIPONEGORO UNIVERSITY
SEMARANG
OBJECT : MANAGEMENT INFORMATION SYSTEM

DESCRIPTION: This subject learn the introduction of information systems, and identify five areas of information systems knowledge they need, illustrate how electronic business, electronic commerce, or enterprise collaboration systems could support a firm’s business processes, managerial decision making, and strategies for competitive advantage, provide examples of the components of real world information systems, illustrate that in an information system, people use hardware, software, data, and networks as resources to perform input, processing, output, storage, and control activities that transform data resources into information products, provide examples of several major types of information systems from your experiences with business organizations in the real world, identify several challenges that a business manager might face in managing the successful and ethical development and use of information technology in a business.

GENERAL OBJECTIVE/TIU: Students can explain why knowledge of information systems is important for business professionals and identify five areas of information systems knowledge they need, give examples to illustrate how electronic business, electronic commerce, or enterprise collaboration systems could support a firm’s business processes, managerial decision making, and strategies for competitive advantage, provide examples of the components of real world information systems, illustrate that in an information system, people use hardware, software, data, and networks as resources to perform input, processing, output, storage, and control activities that transform data resources into information products, provide examples of several major types of information systems from your experiences with business organizations in the real world, identify several challenges that a business manager might face in managing the successful and ethical development and use of information technology in a business.
| 1 | **Explain why knowledge of information systems is important for business professionals and identify five areas of information systems knowledge they need.**

*Give examples to illustrate how electronic business, electronic commerce, or enterprise collaboration systems could support a firm’s business processes, managerial decision making, and strategies for competitive advantage.*

*Provide examples of the components of real world information systems. Illustrate that in an information system, people use hardware, software, data, and networks as resources to perform input, processing, output, storage, and control activities that transform data resources into information products.*

*Provide examples of several major types of information systems from your experiences with business organizations in the real world.*

*Identify several challenges that a business manager might face in managing the successful and ethical development and use of information technology in a business.* | **Foundations of Information Systems in Business** | **1.** An IS Framework for Business Professionals  
**2.** Components of an Information System  
**3.** What is an Information System?  
**4.** What is a System?  
**5.** Components of an Information System  
**6.** Data versus Information  
**7.** Attributes of Information Quality  
**8.** Logical Data Elements  
**9.** Major Roles of Information Systems  
**10.** History of the role of Information Systems  
**11.** The e-Business Enterprise  
**12.** Types of Information Systems  
**13.** Other Categories of Information Systems  
**14.** The Information Systems Development Process  
**15.** Management Challenges of the E-business Enterprise | **1 session** | James O’Brien Ch.1 |
| 2 | • Identify several basic competitive strategies and explain how they can use information technologies to confront the competitive forces faced by a business.  
• Identify several strategic uses of information technology for electronic business and commerce, and give examples of how they give competitive advantages to business.  
• Give examples of how business process reengineering frequently involves the strategic use of e-business technologies, and identify the business value of using e-business technologies for total quality management, to become an agile competitor, or to form a virtual company.  
• Explain how knowledge management systems can help a business gain strategic advantages. | Competing with Information Technology | 1. The Competitive Environment  
2. Fundamental Competitive Strategies - Cont.  
3. Strategic Uses of Information Technology  
4. Strategic Uses of Information Technology  
5. The Value Chain  
6. The Internet Value Chain  
7. Strategic Positioning of Internet Technologies  
8. Customer-Focused e-Business  
10. The Customer-Focused Agile Competitor  
11. Virtual Corporations  
12. Knowledge Management Systems | 1 session | James O'Brien Ch.2 |
| 3 | • Identify the major types, trends, and uses of microcomputer, midrange, and mainframe computer systems.  
• Outline the major technologies and uses of computer peripherals for input, output, and storage. | Computer Hardware | 1. Computer System Categories  
2. Trends in Computer System Capabilities  
3. Microcomputer Systems  
4. Network Computers and Terminals  
5. Computer System Components  
6. Input Technology Trends | 1 session | James O'Brien Ch.3 |

| 6 | Identify several major developments and trends in the industries, technologies, and business applications of telecommunications and Internet technologies. | Telecommunications and Networks | 1. Trends in Telecommunications  
2. Telecommunications Strategic Capabilities  
3. Internet Applications  
4. Business Value from e-Commerce Applications  
5. Basic Components in a Telecommunications Network  
6. Wide Area Networks  
7. WAN  
8. Local Area Networks  
9. Other E-business Networks  
10. Client Server Networking  
11. Client/Server Networks and Network Computing  
12. Telecommunications Communication Media  
13. Telecommunications Processors and Software  
14. Network Topologies  
15. The Internet’s TCP/IP | 1 session | James O’Brien Ch.6 |
| 7 | • Identify each of the following cross-functional e-business systems and give examples of how they can provide significant business value to a company and its customers and business partners.  
• Enterprise resource planning  
• Customer relationship management  
• Enterprise application integration  
• Supply chain management  
• Online transaction processing  
• Enterprise collaboration  
• Give examples of how Internet and other information, technologies support business processes within the business functions of accounting, finance, human resource management, marketing, and production and operations management. |
| Electronic Business Systems | 1. The e-Business Application Architecture  
2. Enterprise Resource Planning  
3. Customer Relationship Management  
4. Cross-Functional Integrated Systems  
5. Supply Chain Management  
6. Transaction Processing Systems  
7. Tools for Enterprise Collaboration  
8. Functional Business Information Systems  
9. Marketing Information Systems  
10. Targeted Marketing  
11. Manufacturing Information Systems  
13. Accounting Information Systems  
14. Financial Information Systems | 1 session | James O'Brien Ch.7 |
|   | Identify the major categories and trends of e-commerce applications.  
   | Identify the essential processes of an e-commerce system, and give examples of how they are implemented in e-commerce applications.  
   | Identify and give examples of several key factors and Web store requirements needed to succeed in e-commerce.  
   | Identify and explain the business value of several types of e-commerce marketplaces.  
   | Discuss the benefit trade-offs of several e-commerce clicks and bricks alternatives.  
|---|---|---|---|---|
| 8 | Electronic Commerce Systems | 1. Electronic Commerce Technologies  
   | 2. Process Categories of e-Commerce  
   | 3. Electronic Payment and Security Systems  
   | 4. e-Commerce Success Factors  
   | 5. e-Commerce Success Marketplaces | 2 session | James O'Brien Ch.8 |
| 9 | Identify the changes taking place in the form and use of decision support in e-business enterprises. |
| Decision Support Systems |
| 1. e-Business Decision Support Applications |
| 2. Decisions in the e-Business |
| 3. Management Information System Reports |
| 4. Online Analytical Processing |
| 5. Decision Support Systems |
| 6. Enterprise Information Portals and DSS |
| 7. Attributes of Intelligent Behavior |
| 8. Artificial Intelligence Applications |
| 9. AI Application Areas in Business |
| 10. Intelligent Agents |
| 11. Components of Expert Systems |
| 12. Expert System Applications |
| 1 session | James O'Brien Ch. 9 |

*Identify the role and reporting alternatives of management information systems.*

*Describe how online analytical processing can meet key information needs of managers.*

*Explain the decision support system concept and how it differs from traditional management information systems.*

*Explain how the following information systems can support the information needs of executives, managers, and business professionals:*

- A) Executive Information Systems
- B) Enterprise Information Portals
- C) Enterprise Knowledge Portals

*Identify how neural networks, fuzzy logic, genetic algorithms, virtual reality, and intelligent agents can be used in business.*

*Give examples of several ways expert systems can be used in business decision-making situations.*
| Developing e-Business Solutions | 1. Systems Approach to Problem Solving  
2. Traditional Systems Development Life Cycle  
3. Prototyping Process  
4. Systems Investigation  
5. Systems Analysis  
6. Systems Design  
7. End User Development  
8. The Implementation Process  
9. Evaluating Hardware and Software  
10. Evaluating IS Services  
11. Implementing New Systems  
12. Installation Conversion Methods  
13. Managing Organizational Change | 2 session | James O'Brien Ch.10 |
|---------------------------------|--------------------------------------------------|-----------------|------------------|
| Use the systems development process outlined in this chapter, and the model of IS components from Chapter 1 as problem-solving frameworks to help you propose information systems solutions to simple business problems. | **Chapter Objectives**  
• Explain how prototyping improves the process of systems development for end users and IS specialists.  
• Identify the activities involved in the implementation of new information systems.  
• Describe several evaluation factors that should be considered in evaluating the acquisition of hardware, software, and IS services.  
• Identify several change management solutions for end user resistance to the implementation of new e-business applications. |
| Security and Ethical Challenges of e-Business | 1. Security and Ethical Challenges  
2. Computer Crime  
3. Common Hacking Tactics  
4. Employment Challenges  
5. Ergonomic Factors in the Workplace  
6. Ethical Considerations  
7. Security Management of e-Business  
8. Other e-Business Security Measures  
9. Computer System Failure Controls  
10. Disaster Recovery  
11. e-Business System Controls and Audits | 1 session | James O'Brien Ch.11

- Identify several ethical issues in how the use of information technologies in e-business affects employment, individuality, working conditions, privacy, crime, health, and solutions to societal problems.
- Identify several types of security management strategies and defenses, and explain how they can be used to ensure the security of e-business applications.
- Propose several ways that business managers and professionals can help to lessen the harmful effects and increase the beneficial effects of the use of information technology.
| 12 | Recognize the difficulties in managing information resources. |
|    | Recognize information systems' vulnerability and manage risk. |
|    | Identify the major aspects of the economics of information technology. |
|    | Demonstrate how to define and measure tangible information technology benefits. |
|    | Show how to evaluate intangible information technology benefits. |

* Identify several ways that information technologies have affected the job of managers in e-business companies. 
* Identify the seven major dimensions of the e-business organization and explain how they affect the success of e-business companies. 
* Identify several cultural, political, and geoeconomic challenges that confront managers in the management of global e-business technologies.

| IT - The Organization and the Individual | 1. Managing e-Business Technologies |
|                                          | 2. |
|                                          | 3. Example of organizational structure of an e-business enterprise |
|                                          | 4. e-Business Technology Management |
|                                          | 5. Benefits Derived from Company IT Planning |
|                                          | 6. Global e-Business Strategies |
|                                          | 7. Business Drivers for Global e-Business |
|                                          | 8. Global IT Platform Issues |
|                                          | 1 session |
|                                          | James O'Brien Ch.12 |

### EVALUATION:
Questions

### REFERENCE:
GENERAL OBJECTIVE: Students can explain why knowledge of information systems is important for business professionals and identify five areas of information systems knowledge they need, give examples to illustrate how electronic business, electronic commerce, or enterprise collaboration systems could support a firm's business processes, managerial decision making, and strategies for competitive advantage, provide examples of the components of real world information systems, illustrate that in an information system, people use hardware, software, data, and networks as resources to perform input, processing, output, storage, and control activities that transform data resources into information products, provide examples of several major types of information systems from your experiences with business organizations in the real world, identify several challenges that a business manager might face in managing the successful and ethical development and use of information technology in a business.

T I K:
- Identify several major developments and trends in the industries, technologies, and business applications of telecommunications and Internet technologies.
- Provide examples of the business value of Internet, intranet, and extranet applications.
- Identify the basic components, functions, and types of telecommunications networks used in business.
- Explain the functions of major types of telecommunications network hardware, software, media, and services.

TOPIC: Telecommunications and Networks

SUB TOPIC:
1. Trends in Telecommunications
2. Telecommunications Strategic Capabilities
3. Internet Applications
4. Business Value from e-Commerce Applications
5. Basic Components in a Telecommunications Network
6. Wide Area Networks
7. WAN
8. Local Area Networks
9. Other E-business Networks
10. Client Server Networking
11. Client/Server Networks and Network Computing
12. Telecommunications Communication Media
13. Telecommunications Processors and Software
14. Network Topologies
15. The Internet's TCP/IP

TUJUAN INSTRUKSIONAL

*GENERAL OBJECTIVE :* Students can explain why knowledge of information systems is important for business professionals and identify five areas of information systems knowledge they need, give examples to illustrate how electronic business, electronic commerce, or enterprise collaboration systems could support a firm's business processes, managerial decision making, and strategies for competitive advantage, provide examples of the components of real world information systems, illustrate that in an information system, people use hardware, software, data, and networks as resources to perform input, processing, output, storage, and control activities that transform data resources into information products, provide examples of several major types of information systems from your experiences with business organizations in the real world, identify several challenges that a business manager might face in managing the successful and ethical development and use of information technology in a business.

TIK :

• Identify the major categories and trends of e-commerce applications.
• Identify the essential processes of an e-commerce system, and give examples of how they are implemented in e-commerce applications.
• Identify and give examples of several key factors and Web store requirements needed to succeed in e-commerce.
• Identify and explain the business value of several types of e-commerce marketplaces.
Discuss the benefits and trade-offs of several e-commerce clicks and bricks alternatives.

**TOPIC**: Electronic Commerce Systems

**SUBTOPIC**:
1. Electronic Commerce Technologies
2. Process Categories of e-Commerce
3. Electronic Payment and Security Systems
4. e-Commerce Success Factors
5. e-Commerce Success Marketplaces

**GENERAL OBJECTIVE**  
Students can explain why knowledge of information systems is important for business professionals and identify five areas of information systems knowledge they need, give examples to illustrate how electronic business, electronic commerce, or enterprise collaboration systems could support a firm's business processes, managerial decision making, and strategies for competitive advantage, provide examples of the components of real world information systems, illustrate that in an information system, people use hardware, software, data, and networks as resources to perform input, processing, output, storage, and control activities that transform data resources into information products, provide examples of several major types of information systems from your experiences with business organizations in the real world, identify several challenges that a business manager might face in managing the successful and ethical development and use of information technology in a business.

**T I K**

*Identify the changes taking place in the form and use of decision support in e-business enterprises.
*Identify the role and reporting alternatives of management information systems.
*Describe how online analytical processing can meet key information needs of managers.
*Explain the decision support system concept and how it differs from traditional management information systems.
*Explain how the following information systems can support the information needs of executives, managers, and business professionals:
   - A) Executive Information Systems
   - B) Enterprise Information Portals
   - C) Enterprise Knowledge Portals
*Identify how neural networks, fuzzy logic, genetic algorithms, virtual reality, and intelligent agents can be used in business.
*Give examples of several ways expert systems can be used in business decision-making situations.

**TOPIC**

: Decision Support Systems

**SUB TOPIC** :
1. e-Business Decision Support Applications
2. Decisions in the e-Business
3. Management Information System Reports
4. Online Analytical Processing
5. Decision Support Systems
6. Enterprise Information Portals and DSS
7. Attributes of Intelligent Behavior
8. Artificial Intelligence Applications
9. AI Application Areas in Business

TUJUAN INSTRUKSIONAL

*GENERAL OBJECTIVE : Students can explain why knowledge of information systems is important for business professionals and identify five areas of information systems knowledge they need, give examples to illustrate how electronic business, electronic commerce, or enterprise collaboration systems could support a firm's business processes, managerial decision making, and strategies for competitive advantage, provide examples of the components of real world information systems, illustrate that in an information system, people use hardware, software, data, and networks as resources to perform input, processing, output, storage, and control activities that transform data resources into information products, provide examples of several major types of information systems from your experiences with business organizations in the real world, identify several challenges that a business manager might face in managing the successful and ethical development and use of information technology in a business.

TIK : 

32
*Use the systems development process outlined in this chapter, and the model of IS components from Chapter 1 as problem-solving frameworks to help you propose information systems solutions to simple business problems.

*Describe and give examples to illustrate how you might use each of the steps of the information system development cycle to develop and implement an e-business system.

Chapter Objectives:

*Explain how prototyping improves the process of systems development for end users and IS specialists.

*Identify the activities involved in the implementation of new information systems.

*Describe several evaluation factors that should be considered in evaluating the acquisition of hardware, software, and IS services.

*Identify several change management solutions for end user resistance to the implementation of new e-business applications.

**TOPIC**: Developing e-Business Solutions

**SUB TOPIC**:  
1. Systems Approach to Problem Solving  
2. Traditional Systems Development Life Cycle  
3. Prototyping Process  
4. Systems Investigation  
5. Systems Analysis  
6. Systems Design  
7. End User Development  
8. The Implementation Process  
9. Evaluating Hardware and Software  
10. Evaluating IS Services  
11. Implementing New Systems  
12. Installation Conversion Methods  
13. Managing Organizational Change

**TUJUAN INSTRUKSIONAL**

*GENERAL OBJECTIVE* : Students can explain why knowledge of information systems is important for business professionals and identify five areas of information systems knowledge they need, give examples to illustrate how electronic business, electronic commerce, or enterprise collaboration systems could support a firm’s business processes, managerial decision making, and strategies for competitive advantage, provide examples of the components of real world information systems, illustrate that in an information system, people use hardware, software, data, and networks as resources to perform input, processing, output, storage, and control activities that transform data resources into information products, provide examples of several major types of information systems from your experiences with business organizations in the real world, identify several challenges that a business manager might face in managing the successful and ethical development and use of information technology in a business.

**TIK**

- Recognize the difficulties in managing information resources.
- Recognize information systems’ vulnerability and manage risk.
- Identify the major aspects of the economics of information technology.
- Demonstrate how to define and measure tangible information technology benefits.
- Show how to evaluate intangible information technology benefits.

*Identify several ways that information technologies have affected the job of managers in e-business companies.*

*Identify the seven major dimensions of the e-business organization and explain how they affect the success of e-business companies.*

*Identify several cultural, political, and geo-economic challenges that confront managers in the management of global e-business technologies.*

**TOPIC** : IT - The Organization and the Individual

**SUB TOPIC** :

1. Managing e-Business Technologies
2. Example of organizational structure of an e-business enterprise
3. e-Business Technology Management
4. Benefits Derived from Company IT Planning
5. Global e-Business Strategies
6. Business Drivers for Global e-Business
7. Global IT Platform Issues
