*Paper Presented in
National Seminar by URDI : Participation Sustainability in the Development Context in Yogyakarta
25-26 July 2008*

Roof first aid program implemented in Kemudo village focuses on participation and empowerment concept. Practical knowledge to respond for existing condition is the output for this program. For temporary shelter activities, it is expected that this program will give technical assistance to construct an earthquake resistant house, so as to improve the local economy and environmentally friendly capability.

Based on observation, it is found that about 84% of the beneficiaries able to finish the program on time, while the rest needs additional time for about a month. This is also because of the financial aid from the government that needs longer time to be given to the beneficiaries.

To sum up, it is clear that local needs and resource allocation are important to respond to dynamic in sustainable development. It is also understandable to form sense of belonging between stakeholders by giving then responsibility, so that minimize the dependency to the aid from the donors. Moreover, indicator settings and target achievement towards performance mechanism would become beneficial tools for better implementation in the future.

Keywords : post disaster, housing, participation
