

## LAMPIRAN I

### 1.1 Perhitungan Panjang gelombang

1.1.1 Panjang gelombang hasil Penelitian dengan memakai peralatan dari laboratorium

#### A. Ralat cacah cincin

no	$\Delta m$	$\Delta m - \bar{\Delta m}$	$(\Delta m - \bar{\Delta m})^2$
1.	32	-1	1
2.	35	2	4
3.	30	-3	9
4.	34	1	1
		15	

no	$\Delta m$	$\Delta m - \bar{\Delta m}$	$(\Delta m - \bar{\Delta m})^2$
1.	64	2	4
2.	65	3	9
3.	62	0	0
4.	58	-4	16
		29	

$$\bar{\Delta m} = 33$$

$$\bar{\Delta m} = 62$$

$$\text{Deviasinya} = \left[ \frac{\sum (\Delta m - \bar{\Delta m})^2}{n(n-1)} \right]^{1/2}$$

$$= (33/12)^{1/2}$$

$$= \pm 1,2$$

$$\text{Deviasinya} = \left[ \frac{29}{12} \right]^{1/2}$$

$$= \pm 2,4$$

no	$\Delta m$	$\Delta m - \bar{\Delta m}$	$(\Delta m - \bar{\Delta m})^2$
1.	99	2	4
2.	100	3	9
3.	95	-2	4
4.	96	-1	1
	97	18	

no	$\Delta m$	$\Delta m - \bar{\Delta m}$	$(\Delta m - \bar{\Delta m})^2$
1.	128	4	16
2.	121	-3	9
3.	119	-5	25
4.	127	3	9
	124	59	

$$\text{Deviasi} = (18/12)^{1/2} = \pm 1,2$$

$$\text{Deviasi} = (59/12)^{1/2} = \pm 2,2$$

no	$\Delta m$	$\Delta m - \bar{\Delta m}$	$(\Delta m - \bar{\Delta m})^2$
1.	160	-3	9
2.	158	5	25
3.	164	1	1
4.	169	6	36
			71

$$\text{Deviasinya} = \left[ \frac{\sum (\Delta m - \bar{\Delta m})^2}{n(n-1)} \right]^{1/2}$$

$$= (71/12)^{1/2}$$

$$= \pm 2,5$$

### B. Ralat Panjang Gelombang

$$\lambda_u = \frac{2 \cdot \Delta d}{\Delta m}$$

$$\frac{\partial \lambda_u}{\partial \Delta d} = \frac{2}{\Delta m} \quad \frac{\partial \lambda_u}{\partial \Delta m} = -\frac{2 \cdot (\Delta d)}{\Delta m^2}$$

$$\text{Deviasinya} = \left[ \left( \frac{\partial \lambda_u \cdot S_{\Delta d}}{\partial \Delta d} \right)^2 + \left( \frac{\partial \lambda_u \cdot S_{\Delta m}}{\partial \Delta m} \right)^2 \right]^{1/2}$$

$$S_{\Delta d} = 1/2(\text{skala alat ukur terkecil}).$$

$$= 1/2(0,01 \text{ mm})$$

$$= 5 \cdot 10^{-6} \text{ meter.}$$

Ralat pada :

1. Cacah cincin 33

$$S_{\lambda u} = ((4 \cdot 10^{-2} \cdot 5 \cdot 10^{-6})^2 + (1,84 \cdot 10^{-8} \cdot 1,2)^2)^{1/2}$$

$$= \pm 2127 \text{ A}$$

2. Cacah cincin 62

$$S_{\lambda u} = ((3 \cdot 10^{-2} \cdot 5 \cdot 10^{-6})^2 + (10^{-8} \cdot 2,4)^2)^{1/2}$$

$$= \pm 1519 \text{ A}$$

3. Cacah cincin 97

$$S\lambda_u = ((2 \cdot 10^{-2} \cdot 5 \cdot 10^{-6})^2 + (6,38 \cdot 10^{-9} + 1,2)^2)^{1/2}$$

$$= \pm 1028 \text{ \AA}$$

4. Cacah cincin 124

$$S\lambda_u = ((1,6 \cdot 10^{-2} \cdot 5 \cdot 10^{-6})^2 + (5,2 \cdot 10^{-9} + 2,2)^2)^{1/2}$$

$$= \pm 914 \text{ \AA}$$

5. Cacah cincin 163

$$S\lambda_u = ((1,2 \cdot 10^{-2} \cdot 5 \cdot 10^{-5})^2 + (3,76 \cdot 10^{-9} \cdot 2,5)^2)^{1/2}$$

$$= \pm 607 \text{ \AA}$$

no	$\Delta d$ (mm)	$\Delta m$	$\lambda_u \text{ \AA}$	$(\lambda_u - \bar{\lambda_u}) \text{ \AA}$	$(\lambda_u - \bar{\lambda_u})^2 \text{ \AA}^2$
1.	0,01	33	6060	-197	38809
2.	0,02	62	6452	195	38025
3.	0,03	97	6186	-71	5041
4.	0,04	124	6452	195	38025
5	0,05	163	6135	-122	14884
$\bar{\lambda_u} = 6257 \text{ \AA}$				134784	

ralat panjang gelombangnya:

$$S\lambda_u = \left[ \frac{\sum (\lambda_u - \bar{\lambda_u})^2}{n(n-1)} \right]^{1/2}$$

$$= (134784/20)^{1/2}$$

$$= \pm 82 \text{ \AA}$$

Jadi panjang gelombang yang sesungguhnya adalah:

$$\lambda_u = (6257 \pm 82) \text{ \AA}$$

**1.1.2. Panjang Gelombang dari Penelitian dengan memakai peralatan hasil perancangan.**

**A. Ralat Cacah cincin**

no	$\Delta m$	$\Delta m - \bar{m}$	$(\Delta m - \bar{m})^2$
1.	30	-4	16
2.	36	2	4
3.	35	1	1
4.	35	1	1
			22

no	$\Delta m$	$\Delta m - \bar{m}$	$(\Delta m - \bar{m})^2$

2.	65	0	0
3.	61	-4	16
4.	64	-1	1
			26

$$\bar{m} = 34$$

$$\bar{m} = 65$$

$$\text{Deviasi} = \left[ \frac{\sum (\lambda_m - \bar{m})^2}{n(n-1)} \right]^{1/2}$$

$$= (22/12)^{1/2}$$

$$= \pm 1,4$$

$$\text{Deviasi} = (26/12)^{1/2}$$

$$= \pm 1,1$$

no	$\Delta m$	$\Delta m - \bar{m}$	$(\Delta m - \bar{m})^2$
1.	103	-6	36
2.	99	2	4
3.	95	-2	4
4.	96	3	9
			53

no	$\Delta m$	$\Delta m - \bar{m}$	$(\Delta m - \bar{m})^2$
1.	121	5	25
2.	127	1	1
3.	125	-1	1
4.	122	-4	16
			49

$$\bar{m} = 97$$

$$\bar{m} = 126$$

$$\text{Deviasi} = (53/12)^{1/2}$$

$$= \pm 2,15$$

$$\text{Deviasi} = (49/12)^{1/2}$$

$$= \pm 1,9$$

no	$\Delta m$	$\Delta m - \bar{\Delta m}$	$(\Delta m - \bar{\Delta m})^2$
1.	163	1	1
2.	158	-4	16
3.	167	3	9
4.	167	3	9
			35

$$\bar{\Delta m} = 64$$

$$\text{Deviasinya} = (35/12)^{1/2} \\ = \pm 1.7$$

### B. Ralat Panjang Gelombang

2.  $\Delta d$

$$\lambda_u = \frac{2}{\Delta m}$$

$$\frac{\partial \lambda_u}{\partial \Delta d} = \frac{2}{\Delta m} \quad \frac{\partial \lambda_u}{\partial \Delta m} = -\frac{2 \cdot \Delta d}{\Delta m^2}$$

$$\text{Deviasinya} = \left[ \left( \frac{\partial \lambda_u \cdot S_{\Delta d}}{\partial \Delta d} \right)^2 + \left( \frac{\partial \lambda_u \cdot S_{\Delta m}}{\partial \Delta m} \right)^2 \right]^{1/2}$$

Ralat pada:

1. Cacah cincin 34

$$S_{\lambda u} = \pm ((4,4 \cdot 10^{-2} \cdot 5 \cdot 10^{-6})^2 + (2,2 \cdot 10^{-2} \cdot 1,4)^2)^{1/2} \\ = \pm 2735 \text{ Å}$$

2. Cacah cincin 65

$$S_{\lambda u} = \pm ((3 \cdot 10^{-2} \cdot 5 \cdot 10^{-6})^2 + (6,38 \cdot 10^{-9} \cdot 1,1)^2)^{1/2} \\ = \pm 1505 \text{ Å}$$

3. Cacah cincin 97

$$S_{\lambda u} = \pm ((2 \cdot 10^{-2} \cdot 5 \cdot 10^{-6})^2 + (6,38 \cdot 10^{-9} \cdot 2,1)^2)^{1/2} \\ = \pm 1010 \text{ Å}$$

4. Cacah cincin 126

$$S\lambda_u = \pm ((1,58 \cdot 10^{-2} \cdot 5 \cdot 10^{-6})^2 + (5 \cdot 10^{-9} \cdot 1,9)^2)^{1/2}$$

$$= \pm 796 \text{ A}$$

5. Cacah cincin 164

$$S\lambda_u = \pm ((1,22 \cdot 10^{-2} \cdot 5 \cdot 10^{-6})^2 + (3,72 \cdot 10^{-9} \cdot 1,7)^2)^{1/2}$$

$$= \pm 642 \text{ A}$$

no	$\Delta d (\text{mm})$	$\Delta m$	$\lambda_u (\text{A})$	$(\lambda_u - \bar{\lambda}_u) A$	$(\lambda_u - \bar{\lambda}_u)^2 \text{ A}^2$
1.	0,01	34	5882	-251	63501
2.	0,02	65	6154	21	441
3.	0,03	97	6185	52	2704
4.	0,04	126	6349	216	46656
5.	0,05	164	6097	-36	1296
					114598

Panjang gelombangnya

$$\bar{\lambda}_u = 6133 \text{ A}$$

deviasi panjang gelombang  $S\lambda_u = \left[ \frac{114598}{20} \right]^{1/2}$

$$= \pm 75$$

Jadi panjang gelombang sesungguhnya hasil penelitian dengan menggunakan peralatan hasil perancangan adalah:

$$\lambda_u = 6133 \pm 75 \text{ A}$$

## 1.2. Perhitungan indeks bias udara

### 1.2.1. Indeks bias udara bebas

Dalam buku literatur (Fisika Universitas Jilid 3, Optik dan Atom) disebutkan bahwa indeks bias udara pada keadaan standart untuk cahaya ungu dengan panjang gelombang 4360 Å adalah : 1,0002957, sedangkan untuk cahaya merah dengan panjang gelombang 6560 Å indeks biasnya adalah : 1,0002914.

Oleh karena hubungan antara indeks bias dan panjang gelombang adalah linier, maka untuk mencari indeks bias dengan panjang gelombang  $\lambda_u = 6257 \text{ Å}$  dan panjang gelombang  $\lambda_u = 6133 \text{ Å}$ , diperoleh dengan memperbandingkan indeks bias udara bebas standartnya, yaitu:

Panjang gelombang ( $\lambda_u$ ) Å	indeks bias bebas ( $n_u$ )
4360	1,0002957
6257	$n_u$
6560	1,0002914

data di atas diperbandingkan:

$$6257 - 4360 \quad n_u - 1,0002957$$

$$6560 - 6257 \quad 1,0002914 - n_u$$

$$n_u = 1,0002920$$

Sedangkan untuk panjang gelombang 6133 Å :

Panjang gelombang $\lambda_u$ (Å)	Indeks bias udara bebas ( $n_u$ )
4360	1,0002957
6133	$n_u$
6560	1,0002914

Data tersebut diperbandingkan:

$$6133 - 4360 \quad nu = 1,0002957$$

$$6560 - 6133 \quad 1,0002914 - nu$$

$$nu = 1,0002922$$

### 1.2.2. Indeks bias udara pada perubahan tekanan ( $\Delta P$ )

#### A. Ralat cacah cincin

no	$\Delta m$	$\Delta m - \bar{\Delta}m$	$(\Delta m - \bar{\Delta}m)^2$
1	45	-1	1
2.	47	1	1
3.	44	-2	4
			6

no	$\Delta m$	$\Delta m - \bar{\Delta}m$	$(\Delta m - \bar{\Delta}m)^2$
1.	96	2	4
2.	90	-4	16
3.	97	3	9
			29

$$\bar{\Delta}m = 46$$

$$\text{Deviasi} = (6/6)^{1/2}$$

$$= \pm 1$$

$$\bar{\Delta}m = 94$$

$$\text{Deviasi} = (29/6)^{1/2}$$

$$= \pm 2,2$$

no	$\Delta m$	$\Delta m - \bar{\Delta}m$	$(\Delta m - \bar{\Delta}m)^2$
1.	134	-5	25
2.	140	1	1
3.	142	3	9
			35

no	$\Delta m$	$\Delta m - \bar{\Delta}m$	$(\Delta m - \bar{\Delta}m)^2$
1.	193	2	4
2.	195	4	16
3.	186	5	25
			45

$$\bar{\Delta}m = 139$$

$$\text{Deviasi} = \pm 2,4$$

$$\bar{\Delta}m = 195$$

$$\text{Deviasi} = \pm 2,7$$

no	$\Delta m$	$\Delta m - \bar{\Delta m}$	$(\Delta m - \bar{\Delta m})^2$
1.	230	7	49
2.	221	-2	4
3.	219	-4	16
			69

no	$\Delta m$	$\Delta m - \bar{\Delta m}$	$(\Delta m - \bar{\Delta m})^2$
1.	260	-5	25
2.	266	1	1
3.	270	5	25
			51

$$\bar{\Delta m} = 223$$

$$\text{Deviasi} = (69/6)^{1/2} \\ = \pm 3,4$$

$$\bar{\Delta m} = 265$$

$$\text{Deviasi} = (51/6)^{1/2} \\ = \pm 2,9$$

no	$\Delta m$	$\Delta m - \bar{\Delta m}$	$(\Delta m - \bar{\Delta m})^2$
1.	312	-4	16
2.	321	5	25
3.	317	1	1
			42

no	$\Delta m$	$\Delta m - \bar{\Delta m}$	$(\Delta m - \bar{\Delta m})^2$
1.	375	1	1
2.	378	4	16
3.	371	-3	9
			26

$$\bar{\Delta m} = 316$$

$$\text{Deviasi} = (42/6)^{1/2} \\ = \pm 2,6$$

$$\bar{\Delta m} = 374$$

$$\text{Deviasi} = (26/6)^{1/2} \\ = \pm 2,1$$

### B. Indeks bias udara terhadap perubahan tekanan ( $\Delta P$ )

B.1 Panjang gelombang  $\lambda u = 6257 \text{ A}$  dan  $n_u = 1,0002920$

$$\tan \alpha = 92$$

$$np^2 - nu \cdot np = \frac{nu \cdot \lambda u \cdot \Delta P \cdot \tan \alpha}{2t}$$

Persamaan diatas diselesaikan dengan rumus abc, maka diperoleh indeks bias udara :

$$np = \frac{nu}{2} + \frac{(nu^2 + 2 \cdot \Delta P \cdot nu \cdot \lambda u \cdot t g a / t)^{1/2}}{2}$$

dimana  $nu$  = indeks bias udara bebas

$$t g a = \frac{\Delta p}{\Delta P} \quad (\text{grafik 4.3})$$

$t$  = Panjang tabung (20 cm)

$\Delta P$  = Perubahan tekanan

Apabila data dimasukkan dalam persamaan diatas diperoleh :

$$np = 0,500148 + \frac{(1,0005841 + 5,76 \cdot 10^{-4} \cdot \Delta P)^{1/2}}{2}$$

### B.2 Ralat indeks bias

$$np = \frac{nu}{2} + \frac{(nu^2 + 2 \cdot \Delta P \cdot t g a \cdot nu \cdot \lambda u / t)^{1/2}}{2}$$

$$\begin{aligned} \frac{\partial np}{\partial \Delta P} &= \frac{1}{4} \left[ \frac{nu^2 + \frac{2 \cdot \Delta P \cdot t g a \cdot \lambda u \cdot nu}{t}}{t} \right]^{-1/2} \cdot \frac{2 \cdot t g a \cdot \lambda u \cdot nu}{t} \\ &= \frac{nu \cdot \lambda u \cdot t g a}{2t (nu^2 + 2 \cdot \Delta P \cdot \lambda u \cdot t g a / t)^{1/2}} \\ &= \frac{5,758 \cdot 10^{-5}}{0,4 (1,000584 + 5,76 \cdot 10^{-4} \Delta P)^{1/2}} \end{aligned}$$

$$S \Delta p = 1/2 \text{ (sekala alat ukur terkecil)}$$

$$= 1/2 (0,5 \text{ Atm})$$

$$= 0,25 \text{ Atm.}$$

ralat indeks bias :

$$S_{np} = \left[ \left[ \frac{\partial np \cdot S_{pp}}{\partial \Delta P} \right]^2 \gamma \right]^{1/2}$$

Dengan demikian harga indeks bias sesungguhnya pada panjang gelombang  $\lambda_u = 6257 \text{ A}$ ,  $n_u = 1,0002920$  adalah:

no	$\Delta P$	np	$S_{np}$
1.	0,5	1,000364	$\pm 3,5975 \cdot 10^{-5}$
2.	1,0	1,000436	$\pm 3,5966 \cdot 10^{-5}$
3.	1,5	1,000508	$\pm 3,5960 \cdot 10^{-5}$
4.	2,0	1,000571	$\pm 3,5956 \cdot 10^{-5}$
5.	2,5	1,000652	$\pm 3,5951 \cdot 10^{-5}$
6.	3,0	1,000724	$\pm 3,5946 \cdot 10^{-5}$
7.	3,5	1,000796	$\pm 3,5940 \cdot 10^{-5}$
8.	4,0	1,000867	$\pm 3,5935 \cdot 10^{-5}$

Demikian untuk panjang gelombang  $\lambda_u = 6133 \text{ A}$  dengan  $n_u = 1,0002922$  serta untuk panjang gelombang  $\lambda_u = 6328 \text{ A}$  dengan  $n_u = 1,00029185$  diselesaikan dengan cara yang sama seperti cara di atas dan hasilnya dapat di lihat pada BAB IV, halaman 42-450..

### LAMPIRAN III
