### **Abstract**

*Make the existence of PPI Karangsong is medium which accommodates fishery activities to make a relationship between direct relevance of upriver and downstream activities. The relevance relationship in fishery activities then forms social, economical and physical interaction relationship implicates on areas development in the surroundings.*

*The problems of fishery activities productivity to prosperity level occurs among fisherman and fisherman labour. Considering the businessmen who dominate fishery activities are fisherman (fisherman labour), whereas the stratification of fisherman in Karangsong is not the only one entity, but it consists of many groups which can be distinguished by the condition of finance ability, besides it occurs an imbalance in the system of earning share.*

*Purpose of research are to know the existence implication of PPI as the fishery activities medium to the fishery economics area development that goes on in PPI Karangsong of Indramayu Subdistrict and to formulate the strategy of fishery economics area development.*

*Technique analysis of the research uses qualitative and quantitative method with descriptive approach. The result of research shows that fishery activities which going on in upriver and downstream activities have created earning value that are earning value obtained by the government (1,6 %) as the facilities provider of PPI Karangsong and KPL Mina Sumitra as the organizer of PPI Karangsong which includes earning value from the implementation allocation (1,65 %) and TPI operational (0,8 %), then earning value from the obtained by fishmongers getting the marginal profit from the result of marketing their fish of local area (11,23 %) and marketing in the surrounding of Indramayu (14,41 %).*

*Today the fishery activities which going on in PPI Karangsong have stimulated economics area development through the sequences of fishery activities value that is entrepreneurship growing and providing vocation for local people based on the utility of resources in the seaboard (nature, human, instation and finance) which are able to create an activity of businessmen related to the fishery activities therefore it can encourage quality improvement and people prosperity.*

*Recommendation related to the problems of earning value achievement for fisherman (fisherman labour) concerning to encourage the prosperity improvement is to conduct cooperation relationship among banks and cooperative (linkage program) to give the finance for fisherman (fisherman labour), hopefully that it is able to change the variation of earning share related to the system of fisherman in Karangsong which occurs between the fisherman and the owner of enterprise.*
