ABSTRACT

In daily life, human requires clean water. Clean water as the most essential needs is not only required for primary needs such as drink, shower, washing, but also as production and other needs. To obtain a good level of human health condition, clean water should available in terms of quantity, quality and continuity.

Clean water supply for people in Padang Pariaman Regency and Pariaman City is provided by Padang Pariaman Local Water Company (PDAM) as Government Owned Enterprise (BUMD) Padang Pariaman Regency Government, there are require cooperation to manage clean water so that clean water supply would not disturb.

This research aims to examine the cooperation of clean water management form between Padang Pariaman Regency and Pariaman Municipality. This research uses field survey methods with secondary and primary data collection method, which processed using descriptive qualitative analysis to identify the potential and cooperation issues, cooperation steps, priority of cooperation forming aspect, determination factors of cooperation, also cooperation development form of clean water management in both of local government. The sample determined using snowballing-purposive sample.

The results, shows that cooperation form of clean water management both Padang Pariaman Regency and Pariaman Municipality is still running right now, the cooperation is not based on mitten agreements. Suggested that Pariaman Padang Regency Government and Pariaman Municipality that is cooperation of clean water management according to both local government character are: 1). Joint agreement, performed both of local government; 2). Service agreement performed by Padang Pariaman Regency (Padang Pariaman PDAM) and there is benefit for Pariaman government as a compensation or royalty; 3). Form of asset delivery from Padang Pariaman Local Water Company (PDAM) to Pariaman Municipality, and raw water purchasing as clean water source to Padang Pariaman Regency. Further research related with forms of cooperation for clean water management among government, suggested that all of aspects should examined deeply, especially for economy aspect (efficiency and effectiveness) and requires examination from social and cultural aspects in order to obtain accurate and detail result according to local socio-cultural character.

Keywords: *Cooperation among government, clean water*
