Deru Marah Laut

Rancangan Sistem Informasi Penilaian Praktikum Pelayanan Asuhan Keperawatan Gigi Untuk Menunjang Obyektivitas Penilaian Praktik Mahasiswa (Studi di Jurusan Keperawatan Gigi Politeknik Kesehatan Kementerian Kesehatan Bandung)

xvi + 165 Halaman + 17 Tabel + 52 Gambar + 7 Lampiran

Penilaian praktikum pelayanan asuhan keperawatan gigi di JKG Poltekkes Bandung masih dilakukan secara manual (*paper base*) dengan menggunakan banyak format *Performance Assessment (PA)* dan pelaporan sehingga mengalami permasalahan dalam pengumpulan dan pengolahan data serta penyajian informasi yang dibutuhkan oleh dosen, mahasiswa dan pihak-pihak lain yang memerlukannya. Keadaan tersebut tentu dapat mengurangi obyektivitas penilaian praktikum itu sendiri. Tujuan penelitian ini adalah menghasilkan Rancangan Sistem Informasi Penilaian Praktikum Pelayanan Asuhan Keperawatan Gigi yang dapat menunjang obyektivitas penilaian praktik mahasiswa di JKG Poltekkes Bandung.

Jenis penelitian ini adalah penelitian eksploratif melalui wawancara mendalam serta analisis data sekunder. Responden ialah empat orang dosen/instruktur, tiga orang pengelola dan tiga orang mahasiswa tingkat III. Pengumpulan data dilakukan dengan metode kualitatif dengan pendekatan waktu *case-study* melalui menelusuri pengalaman responden dan dokumen-dokumen yang digunakan dalam kegiatan praktikum pelayanan asuhan keperawatan gigi di JKG Poltekkes Bandung.

Hasil penelitian menunjukkan bahwa rancangan sistem informasi yang dapat menunjang obyektivitas penilaian praktik Yansuh Watgilut di JKG Poltekkes Bandung pada dasarnya adalah menggantikan kegiatan *data capture* dan pengolahan data yang biasanya dilakukan secara *paper base* menjadi *computer base* berbasis web dengan antar muka yang dapat diakses melalui berbagai perangkat yang terhubung dengan jaringan server sehingga dapat diakses secara online oleh pengguna pada setiap level manajemen.

Saran dari penelitian ini adalah agar rancangan sistem informasi penilaian praktikum pelayanan asuhan keperawatan gigi dapat segera ditindak lanjuti ke tahap pembuatan sehingga dapat digunakan dan dikaji lebih lanjut apakah sistem ini dapat berjalan sesuai harapan serta dievaluasi untuk pengembangan lebih lanjut.

ABSTRACT**Deru Marah Laut****Design of Assessment Information System of Dental Nursing Care Service Practice to Support Objectivity of Student Practice Assessment (A Study at School of Dental Nursing of Health Polytechnic of Health Ministry in Bandung)**

xvi + 165 pages + 17 tables + 52 figures + 7 appendices

Assessment of dental nursing care service practice at School of Dental Nursing (SoDN) of Health Polytechnic of Health Ministry in Bandung was done manually (paper-based) by using various forms of Assessment Performance (AP) and reporting. This condition accounted for some problems in collecting and managing data, and in presenting information that were needed by lecturers, students, and others. In addition, these problems could reduce objectivity of practice assessment. The aim of this study was to result design of assessment information system of dental nursing care service practice that could support objectivity of practice assessment at SoDN of Bandung Health Polytechnic.

This was an explorative study by conducting indepth interview and analysing secondary data. Respondents consisted of four lecturers/instructors, three managers, and three students of level III. Data were collected qualitatively using case-study approach by investigating respondents' experiences and documents that were used to do an activity of dental nursing care service practice.

The results of this research showed that design of information system supporting objectivity of practice assessment of dental nursing care service basically replaced activities of data capture and data management from paper-based to be computer based using inter-face web that could be accessed through various hardware connected to server network. As a result, it could be accessed online by users at a management level.

As a suggestion, the resulted design needs to be followed up by developing the system in order to be utilised and performed further analyses to make sure that a developed system runs in accordance with expectation and is evaluated to do further development.
