ABSTRACT

Towns growth in Indonesia can't detachable from informal sector attendance, what integrally have incoming each; every activity of urban life. This symptom dualisme become typical colour from life of urban and this condition happened almost in all functional environment area of town. Informal sector existence can't be discharged from development process, where imbalance of development of countryside and town, drawing urbanization current to town. This matter cause growth sum up labor force which don't in line with of employment. In situation of this is all searcher work to take to informal sector in fulfilling requirement live its.

One of informal sector effort is the street vendor. It's in growth is the street vendor confront government at condition which dilematis, one of his existence side earn to create employment, while on the other hand existence of the street vendor which is not reckoned in the plan the planology have come to burden for town. The strrt vendor have activity at public spaces of town without bothering public interest, of the happening of distrosi function from the space. In the end structur physical of a period of/to and the town space in creating environmental compatibility of town frequently do not in line with what have been planned.

This research aim to to know to conduct study to the street vendor which have activity at environment of Pekanbaru city for know influence generated from existence of the steer vendor to environmental physical and urban community of Pekanbaru city.

Used by research is descriptive of eksplanatory, while used by analysis technique is quantitative descriptive by using ata analyse distbusi of frequency and cross tabulation, and also be supported by descriptive analysis qualitative. Qualitative. Sampel from research cover PKL in Pekanbaru City and Urban Community of Pekanbaru.

Pursuant to analysis done by that in earning the research finding that is there are relation of between behavior of activity PKL with element of environment physical indicating that behavior of activity PKL have an effect on to environmental physical element. From result analyse known that by existence of merchant of cloister have an effect on negativity to environmental physical elements of Pekanbaru City. Then to society of existence the street vendor of besides giving negative influence also give benefit to society.

From result of above research finding concluded by that existence of the street vendor Exploiting public spaces of town have generated negativity influence, what resulted by a behavioral factor of activity of the street vendor and orders of about the street vendor which uncommitt in an optimal fashion. But for society of besides negative side have also given positive side. From result analyse and the conclusion made by an recommendation for the continuation study of related to activity street vendor in urban.
