DAFTAR ISI

SIMULASI PROTEKSI TRAFO TENAGA DARI GANGGUAN FASA TANAH (REF) BERBASIS ARDUINO MEGA2560 DILENGKAPI DENGAN HUMAN MACHINE INTERFACE (HMI) ........................................................................................................ i

HALAMAN PENGESEAHAN ................................................................................................. ii

SURAT PERNYATAAN BEBAS PLAGIAT ........................................................................ iv

HALAMAN MOTO DAN PERSEMBAHAN ........................................................................ vi

KATA PENGANTAR ........................................................................................................ vi

DAFTAR ISI ................................................................................................................... ix

DAFTAR GAMBAR ........................................................................................................ xv

DAFTAR TABEL ............................................................................................................... xx

DAFTAR LAMPIRAN ......................................................................................................... xxii

ABSTRAK ......................................................................................................................... xxiii

ABSTRACT ....................................................................................................................... xxiv

BAB I PENDAHULUAN ...................................................................................................... 1

1.1 Latar Belakang ........................................................................................................... 1

1.2 Permasalahan ............................................................................................................. 2

1.3 Tujuan ......................................................................................................................... 2
BAB I

1.4 Manfaat..........................................................................................................................3
1.5 Batasan Masalah..............................................................................................................3
1.6 Sistematika Penyusunan..................................................................................................4

BAB II

2.1 Tinjauan Pustaka.............................................................................................................6
2.2 Dasar Teori.......................................................................................................................7
2.2.1 Sistem Transmisi Tenaga Listrik..............................................................................7
2.2.2 Sistem Proteksi Tenaga Listrik..................................................................................8
2.2.2.1 Proteksi Utama.........................................................................................................8
2.2.2.2 Proteksi Cadangan....................................................................................................8
2.2.2.3 Rangkaian Sistem Proteksi....................................................................................9
2.2.2.4 Syarat Sistem Proteksi............................................................................................9
2.2.3 Pemutus Tenaga (PMT).............................................................................................10
2.2.4 Transformator Arus (Current Transformer)............................................................11
2.2.5 Sistem Tiga Fasa.......................................................................................................11
2.2.5.1 Hubungan Star.......................................................................................................12
2.2.5.2 Hubungan Delta.....................................................................................................13
2.2.6 Keseimbangan Beban dan Tidak Seimbang.............................................................13
2.2.8 Arus Netral Karena Beban Tidak Seimbang.............................................................15
2.2.9 Perhitungan Ketidakseimbangan Beban..................................................16
2.2.10 Restricted Earth Fault (REF).................................................................17
2.2.11 SCADA.................................................................................................19
  2.2.11.1 Pengertian SCADA..........................................................................19
  2.2.11.2 Fungsi Dasar SCADA......................................................................19
  2.2.11.3 Fungsi Utama SCADA......................................................................20
  2.2.11.4 Bagian SCADA.................................................................................22
2.2.12 MODBUS.................................................................................................27
  2.2.12.1 MODBUS APPLICATION LAYER...................................................28
  2.2.12.2 FUNCTION CODE...........................................................................29
  2.2.12.3 EXCEPTION CODE..........................................................................29
  2.2.12.4 MODBUS OVER SERIAL LAYER...................................................30
2.2.13 ARDUINO MEGA 2560.................................................................31
  2.2.13.1 Catu Daya.........................................................................................33
  2.2.13.2 Memori...............................................................................................35
  2.2.13.3 Input dan Output..............................................................................35
  2.2.13.4 Komunikasi......................................................................................36
  2.2.13.5 Program..............................................................................................37
2.2.14 Ethernet Shield.........................................................................................41
2.2.15 MCB ...........................................................................................................42

2.2.16 Catu Daya ....................................................................................................44

2.2.16.1 Transformator ..........................................................................................45

2.2.16.2 Penyearah Gelombang (Rectifier) ..............................................................49

2.2.16.3 Filter ..........................................................................................................53

2.2.16.4 Penstabil Tegangan (Voltage Regulator) ...................................................55

2.2.14 Pull Down ....................................................................................................55

2.2.15 ULN 2803 ....................................................................................................56

2.2.15.1 Relai .........................................................................................................57

2.2.16 Sensor Arus ACS 712 ...................................................................................59

2.2.17 VT SCADA ...................................................................................................60

BAB III PERANCANGAN SIMULASI PROTEKSI TRAFO TENAGA DARI
GANGGUAN FASA TANAH (REF) BERBASIS ARDUINO MEGA 2560
DILENGKAPI DENGAN HUMAN MACHINE INTERFACE (HMI) ............75

3.1 Blok Diagram ....................................................................................................75

3.2 Peracangan Perangkat Keras .............................................................................77

3.2.1 Rangkaian Catu Daya 12 V DC .................................................................77

3.2.2 Rangkaian Catu Daya 12 V DC .................................................................80

3.2.3 Rangkaian Driver Relay 12 V DC ...............................................................81
3.2.4 Rangkaian Pull Down Resistor.................................................................84
3.2.5 Arduino Mega 2560..................................................................................84
3.2.6 Flowchart Simulasi Alat..........................................................................86
3.2.7 Cara Kerja Sistem..................................................................................87
3.2.8 Rangkaian Keseluruhan.........................................................................89

BAB IV PEMBUATAN ALAT SIMULASI PROTEKSI TRAFO TENAGA DARI
GANGGUAN FASA TANAH (REF) BERBASIS ARDUINO MEGA 2560
DILENGKAPI DENGAN HUMAN MACHINE INTERFACE (HMI).................90

4.1 Pembuatan Perangkat Keras......................................................................90
4.1.1 Rangkaian Catu Daya............................................................................93
4.1.2 Rangkaian Driver Relai 12 VDC............................................................94
4.1.3 Rangkaian Gangguan............................................................................96
4.1.4 Rangkaian Push Button.........................................................................97
4.1.5 Rangkaian Buzzer..................................................................................98
4.1.6 Langkah Pembuatan PCB.......................................................................100
4.1.7 Langkah Perakitan Alat.........................................................................103

4.2 Pembuatan Perangkat Lunak VT SCADA................................................104

BAB V PENGENUKURAN DAN PENGUJIAN SIMULASI PROTEKSI TRAFO
TENAGA DARI GANGGUAN FASA TANAH BERBASIS ARDUINO MEGA
5.1 Peralatan yang Digunakan........................................................................114
5.2 Prosedur Pengukuran dan Percobaan..................................................115
5.3 Pengukuran Rangkaian.........................................................................115
  5.3.1 Rangkaian catu daya........................................................................115
  5.3.2 Rangkaian Driver Relay.................................................................116
  5.3.3 Rangkaian 3 fasa...........................................................................119
5.4 Perhitungan..........................................................................................124
5.5 Pembahasan.........................................................................................128
BAB VI PENUTUP.......................................................................................130
  6.1 Kesimpulan........................................................................................130
  6.2 Saran..................................................................................................130
DAFTAR PUSTAKA....................................................................................132
