Abstract

[View references \(29\)](#)

The objective of this study was to analyze the influence of the implementation of fiscal decentralization on the poverty status taken place at district/city level in Central Java province. The analysis tool used was multiple linear regression, and the method applied was Fixed Effect Model (FEM) supported by data pooling during 2009 - 2015 taken from 35 districts/cities in Central Java province. The study found that fiscal decentralization are able to reduce the number of poor people in Central Java. In addition, the increasing number of private investments and employments functions as an instrument to reduce the number of poor people. © IAEME Publication.

Coverage 2016-ongoing

Scope International Journal of Civil Engineering and Technology (IJCIET) is a peer-reviewed, open access journal that publishes original research articles and review articles in all areas of civil engineering. The Journal is a peer-reviewed journal, aims to provide the most complete and reliable source of information on recent developments in civil engineering. The journal provides a forum for the International Civil Engineering Community to present and discuss matters of major interest e.g. new developments in civil regulation.
